QUALITY ASSURANCE DOCUMENTATION

Document Overview

This document defines the high-level functional and non-functional requirements for the SauceDemo website, based on the behavior described for the application under test. These requirements provide a baseline for designing test scenarios, detailed test cases, and the Requirement Traceability Matrix (RTM).

1. Functional Requirements

The following requirements describe the key functions expected from the SauceDemo website. Each criterion provides an observable check for testing.

FR01 The system shall authenticate users using a valid username and password.

Acceptance criteria

- AC1: A valid login redirects the user to the Products page.
- AC2: Invalid login details trigger an error message.

FR02 The system shall support predefined demo users with different behavior patterns.

Acceptance criteria

- AC1: All demo users can attempt to log in.
- AC2: User-specific behavior is displayed correctly, including locked access, visual issues, or slower performance where applicable.

FR03 The system shall display a product catalogue containing product names, prices, and images.

Acceptance criteria

- AC1: Product details are visible in the catalogue.
- AC2: The layout renders correctly at 1920 × 1080 resolution.

FR04 The system shall provide sorting options for products.

Acceptance criteria

- AC1: Sorting rearranges products according to the selected option.
- AC2: The selected sort order is applied immediately.

FR05 The system shall allow users to add products to and remove products from the shopping cart.

Acceptance criteria

- AC1: Adding a product increases the cart count.
- AC2: Removing a product decreases the cart count.
- AC3: The cart shows the correct product details.

FR06 The system shall display shopping-cart details, including product name, quantity, price, and subtotal.

Acceptance criteria

- AC1: The cart lists all selected products.
- AC2: The subtotal equals the sum of the item prices.

FR07 The system shall collect customer information during checkout, including first name, last name, and postal code.

Acceptance criteria

- AC1: Required fields left empty display validation messages.
- AC2: Valid information allows the user to proceed to Checkout Step Two.

FR08 The system shall show an order summary containing the item total, tax, and final amount.

Acceptance criteria

- AC1: The item total matches the items in the cart.
- AC2: The final amount equals the item total plus tax.

FR09 The system shall allow users to complete an order and display an order-confirmation page.

Acceptance criteria

- AC1: A confirmation message appears after the order is completed.
- AC2: The cart is reset after completion.

FR10 The system shall allow users to log out and end their session.

Acceptance criteria

- AC1: Logging out redirects the user to the Login page.
- AC2: Protected pages require the user to log in again.

FR11 The system shall maintain a consistent and usable user interface.

Acceptance criteria

- AC1: UI elements do not overlap at 1920 × 1080 resolution.
- AC2: Text and buttons remain visible and clickable.

2. Non-Functional Requirements

The following requirements describe quality expectations for performance, usability, browser compatibility, stability, and access control.

NFR01 The Products page shall load within a reasonable time under normal network conditions.

Acceptance criteria

- AC1: The Products page loads without observable delay or freezing.

NFR02 The website shall provide a clean, readable, and user-friendly interface.

Acceptance criteria

- AC1: UI elements are correctly aligned.
- AC2: Text and buttons are clearly visible at 1920 × 1080 resolution.

NFR03 The website shall operate correctly in the supported browser, Google Chrome.

Acceptance criteria

- AC1: Features work as expected in Google Chrome version 142 or later.
- AC2: No inconsistencies are observed in the interface or functionality.

NFR04 The website shall remain stable during normal functional operations.

Acceptance criteria

- AC1: No crashes or unexpected termination occur during typical user flows.
- AC2: Pages navigate smoothly without errors.

NFR05 The website shall enforce basic access control for authenticated pages.

Acceptance criteria

- AC1: Attempts to access restricted pages without authorization redirect to the Login page.
- AC2: The session ends correctly after logout.

3. Traceability and Use

Use requirement identifiers FR01–FR11 and NFR01–NFR05 consistently when creating test scenarios, detailed test cases, execution records, and the RTM. Each acceptance criterion should be validated against the behavior observed during testing.

4. Notes and Assumptions

- Requirements and acceptance criteria are based on the supplied SauceDemo HLR document.
- The stated browser baseline is Google Chrome version 142 or later, as written in the source document.
- The display-resolution checks are specified at 1920 × 1080.
- Performance criteria use qualitative wording such as “reasonable time” and “without observable delay”; the source does not define numeric response-time thresholds.
- No new functional requirements have been intentionally added in this redesign.

Review and Approval

The source document is marked Final. The fields below are retained for document governance and can be completed or updated by the responsible team.
